EDUCATION

University of California, Riverside – B.S., Computer Science Sept. 2020 – Jun. 2024
Coursework: Data Structures and Algorithms, Discrete Structures, Web Development, Project Sequence in CS

WORK EXPERIENCE

[Elevance Health](#) | **HTML/CSS/JS, React.js, SQL, MUI, Jira, REST API** May. 2024 – Aug. 2024
Developer Intern Cerritos, CA

- Advanced the functionality of CTracker, a Full-Stack React application used for maintaining employee credentials with REST API and SQL querying, delivering improved functionality to managers/auditors.
- Boosted user satisfaction by leveraging the MUI framework & HTML/CSS/JS to optimize the UI/UX of many key React.js web applications.
- Successfully developed a Process Design Document outlining steps for project automation, helping streamline workflows for programmers, leading to more efficient Stop-loss claim development.

[CE-CERT](#) | **Python, Pandas, HTML, Microsoft Office, Jupyter Notebook** Aug. 2022 – Jun. 2023
Data Science Intern Riverside, CA

- Built interactable HTML plots on Power Systems data using Python and Pandas, saving the Western Municipal Water District more than \$100,000.
- Developed fire prevention code using Python to analyze the charging levels of 1000Ah batteries, resulting in the removal of 15 bad batteries to yield a successful Mobile Battery Trailer Project.
- Leveraged Microsoft Office software to enhance battery data presentations during meetings.

PROJECTS

[UCR TA Hiring Website](#) | **Figma, HTML/CSS/JS, React.js, MongoDB, Next.js** Oct. 2023 – Mar. 2024

- Led a team of four to launch a Full-Stack website for UCR teaching assistants, improving the user experience and interface design through Figma wireframes.
- Utilized HTML/CSS/JS to create separate frontend routes and features for professors (profile updating and applicant viewing) and students (resume uploading and job application).
- Implemented API calls to gather student transcripts, fetch application decisions from professors, and register new users into MongoDB.
- Employed Next.js for secure webpage routing, user authentication, and database calling/fetching commands.

["Mic Check" Game](#) | **Python, Git, GitHub, PyGame, PyAudio, Visual Studio Code** Nov. 2023

- Engineered a microphone-based video game with a friend, beating over 30 competitors and winning the UCR Cutiehack 2023 Hackathon.
- Demonstrated effective team collaboration by leveraging Git/GitHub for version control and organizing ad hoc meetings to discuss development issues, ensuring project completion within a swift 12-hour timeframe.
- Utilized PyGame and PyAudio libraries to implement game logic, including audio recordings and mouse inputs.

[Personal Website](#) | **HTML/CSS, JavaScript, React.js, Email.js** Jun. 2024 – Sept. 2024

- Developed a React.js based website to dynamically showcase my career experience, coding projects, and art illustrations.
- Integrated the Email.js library to create seamless messaging functionality, allowing viewers to directly send inquiries to my professional email.
- Enhanced user interactivity with draggable popup windows and embedded audio using JavaScript, enriching the website's functionality and user-experience.

TECHNICAL SKILLS

Programming & Web Development: C++, C#, Python, HTML/CSS/JS, React.js, Next.js, Node.js, SQL
Frameworks & Libraries: Express.js, MUI, Pandas, PyGame, PyAudio
Tools & Software: Jira, Git/GitHub, Figma, MongoDB, VSCode, Microsoft Office, Unity
